

Resolution

ENROLLED SENATE
RESOLUTION NO. 30

By: Paxton

A Resolution urging federal action to reform United States processes relating to permitting and environmental review in order to expedite the deployment of modern energy infrastructure; and directing distribution.

WHEREAS, Oklahoma recognizes that abundant, resilient, and diversified domestic energy production in the United States enhances American national security, economic competitiveness, and energy independence; and

WHEREAS, environmental stewardship that keeps our air and water clean, protects public health, ensures biodiversity and species protection, and conserves public lands is a worthy goal that is important to achieve; and

WHEREAS, the excessively complex federal permitting and environmental review processes that have built up around our nation's environmental laws - including the National Environmental Policy Act of 1969, the Endangered Species Act of 1973, the National Historic Preservation Act, the Clean Water Act, and dozens of other federal requirements - have grown to be so cumbersome that they often unnecessarily slow or prevent the construction of essential new energy infrastructure and therefore discourage domestic energy production without advancing the goals of these laws; and

WHEREAS, energy is produced in the United States at a much higher environmental standard than is typically the case in the countries from which energy is imported, so prevention of domestic energy production undermines environmental stewardship; and

WHEREAS, delays caused by permitting inefficiencies inhibit the building of all of the essential components of a low-cost, reliable, and modern energy infrastructure that is needed to support economic competitiveness and domestic manufacturing, to enhance reliability and prevent blackouts, to lower costs for consumers and businesses, and to achieve the goals of our nation's environmental laws; and

WHEREAS, after nearly two decades of flat electricity demand, demand for electricity in the United States is projected to dramatically increase in the coming decades, requiring major increases in domestic energy production and a more than doubling of domestic electricity transmission grid capacity; and

WHEREAS, regulatory barriers today mean that more than two thousand gigawatts of energy production and storage - more than the entire current American electricity capacity combined - are stuck in electricity interconnection queues and the average amount of time to interconnect new energy resources has nearly doubled from about two years to nearly four years; and

WHEREAS, the average time it takes to process an environmental impact statement under the National Environmental Policy Act of 1973 for major infrastructure projects has risen to an excessive length of four-and-a-half years; and

WHEREAS, the United States is highly reliant on China and other countries that do not share our interests to mine and process critical minerals, with demand for some of these minerals potentially growing by more than forty times by 2040; and

WHEREAS, other developed nations that share our goals to protect the environment while producing abundant energy resources, such as Canada and Australia, have shown that they can permit new mines within two to three years instead of nearly ten years, as is often the case in the United States; and

WHEREAS, both linear infrastructure - such as pipelines and transmission lines - as well as energy generation infrastructure each face extraordinary and indefensible delays due to overlitigation, inappropriate blocking of nationally important projects by unrepresentative and often radical groups that hold

those projects hostage, and excessive use of our court system to hamstring worthy projects; and

WHEREAS, major delays in projects caused by inefficient permitting or overlitigation can dramatically increase costs and make projects less viable, costing consumers, businesses, and taxpayers money and making our energy system less reliable; and

WHEREAS, unnecessary permitting and regulatory delays also increase American dependence on energy produced by foreign dictators and authoritarian regimes; and

WHEREAS, unnecessary permitting delays limit investments made in modernizing our nation's infrastructure that would result in a more efficient energy system with reduced emissions and environmental impact; and

WHEREAS, overlapping federal permitting requirements lack the flexibility to allow for efforts that reflect the spirit and intent of traditional environmental laws by protecting human health and the environment instead of procedural compliance with outdated regulations; and

WHEREAS, failure to reform federal permitting laws is already resulting in fewer jobs, reduced security, and higher prices for Americans without providing additional benefits for the environment; and

WHEREAS, failing to reform these laws in the coming months will result in even greater limitations on our energy infrastructure, costing even more American jobs while raising costs for consumers and businesses and leaving the United States vulnerable to unreliability, blackouts, and the resulting severe harm to the American people.

NOW, THEREFORE, BE IT RESOLVED BY THE SENATE OF THE 2ND SESSION OF THE 59TH OKLAHOMA LEGISLATURE:

THAT the Oklahoma State Senate urges federal legislators to work in good faith to enact legislation that reforms federal permitting and environmental review processes to promote economic and

environmental stewardship by expediting the deployment of modern energy infrastructure.

THAT these reforms should enable faster and lower-cost construction of energy infrastructure of all kinds, without prejudice, including by considering steps to: 1) limit excessive use of judicial processes to slow projects inappropriately; 2) prevent inappropriate usage of the Clean Water Act and other laws to hamstring the lawful building of linear energy infrastructure, such as pipelines and transmission lines; 3) enact reforms to plan, permit, and pay for the necessary build-out of electricity transmission infrastructure to support a more reliable energy grid that lowers costs for consumers and businesses; and 4) enable the domestic build-out of the full array of modern energy technologies, including nuclear, emissions management, hydrogen, critical mineral mining and processing, and all other needs for a modern energy system. These legislative reforms should also strive to ensure accountability for federal agencies conducting federal permitting and environmental review processes, including better data, more aggressive timelines, and permitting shot clocks. These legislative reforms must be accompanied by a redoubling of efforts to streamline federal regulations to support the efficient building of new energy infrastructure.

THAT failure to act to update our federal permitting system to support building new energy infrastructure will further harm consumers, workers, and businesses, while making the United States less competitive and more vulnerable to both foreign adversaries and domestic outages. Congress must act with urgency in the coming months to fix our broken permitting system.

THAT copies of this resolution be distributed to the President Pro Tempore of the United States Senate, to the Speaker of the United States House of Representatives, and to the members of Oklahoma's Congressional delegation.

Adopted by the Senate the 13th day of March, 2024.
